Linh Xuan W., Ho Chi Minh City (prev. Linh Trung W., Thu Duc)

ABOUT ME

I'm a Software Developer with 3 years of experience in backend development, mainly using Go. I'm also familiar with Java, Node.js, Python and microservices architecture. Additionally, I have experience working with AI tools and applying critical thinking to validate AI-generated outputs. I enjoy learning new technologies and finding better ways to build great software

SKILLS

- Golang, Fiber, Echo, Gin, GORM.
- Java, Spring Framework, JPA/Hibernate, Thymeleaf.
- MedusaJS (headless e-commerce platform built with Node.js)
- PostgreSQL, MySQL, MongoDB, Redis.
- Microservice, REST, gRPC, RabbitMQ, NATS, Metabase, Apache NiFi (ETL).
- Docker, Git, CI/CD.
- AWS S3, EC2, Google Cloud Platform.
- Design Pattern, S.O.L.I.D, Clean Architecture.
- AI Tools (ChatGPT, Copilot, etc.) and validate AI-generated outputs.
- Domain Experience: Fintech, E-Commerce, ERP, Retails.

EXPERIENCES

Backend Developer

TTC AgriS

AgriOS Platform – Marketplace Service

Oct 2025 – Now

- Designed and implemented core gRPC-based product APIs, achieving sub-200ms response times through Redis-based caching and optimized query patterns.
- Developed a dynamic pricing configuration engine supporting region- and station-level overrides, enabling flexible price control without code changes.
- Built a scalable File Upload Service with real-time image compression, cutting AWS S3 storage costs by approximately 20%.
- Architected an asynchronous notification pipeline using Golang, RabbitMQ, and FCM, designed for high-throughput workloads and horizontal scalability.
- Contributed to system-level design decisions to improve fault tolerance, scalability, and performance across marketplace services.

Backend Developer

FUTA GROUP

Goopay Wallet | goopay.vn

May 2024 – Oct 2025

- Developed reporting APIs for the SIMO system (State Bank of Vietnam), handling large-scale financial data.
- Built dashboards with Metabase and Bytebase, reducing manual reporting effort by ~60%.

- Implemented automated alerting for ID document expiry (Citizen ID/passport), achieving >95% notification coverage.

Funong | funong.vn

- Participated in designing and developing backend APIs for the MVP of an agriculture-focused C2C marketplace, ensuring rapid delivery and scalability for early-stage growth.
- Optimized system performance to maintain 90th percentile API response times under 200ms, improving overall user experience and system reliability under increasing traffic.
- Designed and implemented a microservices architecture with 8+ services using Go, PostgreSQL, Redis, RabbitMQ, and gRPC, enabling scalable and high-performance inter-service communication.
- Applied the SAGA pattern to manage distributed transactions across services, ensuring data consistency without tight coupling, and leveraged RabbitMQ for publishing domain events to support asynchronous processing and system decoupling.

Distribution Hub

- Designed and developed a retail distribution system for third-party services, including bus tickets (Futabus) and travel insurance (Bao Viet), enabling seamless partner integrations.
- Implemented idempotency using Redis to guarantee reliable transaction processing and prevent duplicate requests in high-concurrency scenarios.
- Ensured system performance with SLA < 500ms per request, maintaining stable response times under load.
- Integrated distributed tracing and monitoring using SigNoz, reducing debugging and incident resolution time by ~30%.

Backend Developer Intern

DatVietVAC Group (VieON)

July 2023 – Nov 2023

- During my work experience, I have received training in the Go programming language and various frameworks for developing web backend applications.
- I participated in developing APIs for a partner website of VieON and interacting with other services in a microservices architecture to build applications.

FREELANCE

AIDE – Learning Platform for Dental Medicine Students

| aide.edu.space

AI-powered medical training tool for dental students

- Developed a web application integrating ChatGPT API to simulate virtual patient interactions.
- Implemented a rule-based evaluation engine to score diagnostic steps, with real-time personalized feedback generated via ChatGPT.

CERTIFICATIONS

- Spring & Hibernate for Beginners – [Udemy](#)
- Google Cloud Big Data and ML Fundamentals – [Coursera](#)
- TOEIC – IIG

EDUCATION**Information Technology – Distinction**

- HCMC University of Technology and Education (2020 – 2024)

ACHIEVEMENTS

- Silver & Bronze Medals in Informatics – HCM City Olympiad April (2019, 2018)
- Third Prize & Consolation Prize – Young Informatics Competition (2019, 2018)
